

Functions & Interval Notation

Jacob Zante

September 13th, 2024

1. Arrange these values in order, from least to greatest:

$$|-5|, |20|, |-15|, |12|, |-25|$$

$$\begin{aligned} &= |-5|, |12|, |-15|, |20|, |-25| \\ &= 5, 12, 15, 20, 25 \end{aligned}$$

2. Evaluate.

$$\begin{aligned} \text{a)} \quad &|-22| \\ &= 22 \end{aligned}$$

$$\begin{aligned} \text{b)} \quad &-|-35| \\ &= -35 \end{aligned}$$

$$\begin{aligned} \text{c)} \quad &|-5-13| \\ &= 18 \end{aligned}$$

$$\begin{aligned} \text{d)} \quad &|4-7|+|-10+2| \\ &= |-3|+|-8| \\ &= 11 \end{aligned}$$

$$\begin{aligned} \text{e)} \quad &\frac{|-8|}{|-4|} \\ &= -2 \end{aligned}$$

$$\begin{aligned} \text{f)} \quad &\frac{|-22|}{|-11|}+\frac{-16}{|-4|} \\ &= 2+ -4 \\ &= -2 \end{aligned}$$

3. Express using absolute value notation.

$$\begin{aligned} \text{a)} \quad &x < -3 \text{ or } x > 3 \\ &|x| > 3 \end{aligned}$$

$$\begin{aligned} \text{b)} \quad &-8 \leq x \leq 8 \\ &|x| \leq 8 \end{aligned}$$

$$\begin{aligned} \text{c)} \quad &x \leq -1 \text{ or } x \geq 1 \\ &|x| \geq 1 \end{aligned}$$

$$\begin{aligned} \text{d)} \quad &x \neq \pm 5 \\ &|x| \neq 5 \end{aligned}$$

4. Graph on a number line.

$$\text{a)} \quad |x| < 8$$

$$\text{b)} \quad |x| \geq 16$$

$$\text{c)} \quad |x| \leq -4$$

$$\text{d)} \quad |x| > -7$$

5. Rewrite using absolute value notation.

$$\begin{aligned} \text{a)} \quad & \\ &|x| \leq 3 \end{aligned}$$

$$\begin{aligned} \text{b)} \quad & \\ &|x| > 2 \end{aligned}$$

$$\begin{aligned} \text{c)} \quad & \\ &|x| \geq 2 \end{aligned}$$

$$\begin{aligned} \text{d)} \quad & \\ &|x| < 4 \end{aligned}$$

6. Graph $f(x) = |x-8|$ and $g(x) = |-x+8|$.

a) What do you notice?
 $g(x)$ is just $f(x)$ mirrored in the y-axis.

b) How could you have predicted this?
by factoring out -1 from $g(x)$ to make it $g(x) = |-(x-8)|$, the -1 behaves like the k value on any other function, simply mirroring the graph in the y-axis.

7. Graph the following functions.

$$\text{a)} \quad f(x) = |x-2|$$

$$\text{b)} \quad f(x) = |x|+2$$

$$\text{c)} \quad f(x) = |x+2|$$

$$\text{d)} \quad f(x) = |x|-2$$

8. Compare the graphs you drew in question 7. How could you use transformations to describe the graph of $f(x) = |x+3|-4$?

translate left 3 units

translate down 4 units

9. Predict what the graph of $f(x) = |2x+1|$ will look like. Verify your prediction using graphing technology.

$$f(x) = |2(x+\frac{1}{2})|$$

h. compression by a factor of $\frac{1}{2}$

translate left $\frac{1}{2}$ units

10. Predict what the graph of $f(x) = 3-|2x-5|$ will look like. Verify your prediction using graphing technology.

$$f(x) = 3-|2(x-\frac{5}{2})|$$

$$f(x) = -|2(x-\frac{5}{2})|+3$$

reflected in x-axis
