

Functions & Interval Notation

Jacob Zante

September 9th, 2024

1. Arrange these values in order, from least to greatest:

$$|-5|, |20|, |-15|, |12|, |-25|$$

$$= |-5|, |12|, |-15|, |20|, |-25|$$

$$= 5, 12, 15, 20, 25$$

2. Evaluate.

a) $|-22|$

$$= 22$$

b) $-|-35|$

$$= -35$$

c) $|-5-13|$

$$= 18$$

d) $|4-7|+|-10+2|$

$$|-3|+|-8|$$

$$= 11$$

e) $\frac{|-8|}{|-4|}$

$$= -2$$

f) $\frac{|-22|}{|-11|} + \frac{-16}{|-4|}$

$$= 2 + -4$$

$$= -2$$

3. Express using absolute value notation.

a) $x < -3$ or $x > 3$

$$|x| > 3$$

b) $-8 \leq x \leq 8$

$$|x| \leq 8$$

c) $x \leq -1$ or $x \geq 1$

$$|x| \geq 1$$

d) $x \neq \pm 5$

$$|x| \neq 5$$

4. Graph on a number line.

a) $|x| < 8$

b) $|x| \geq 16$

c) $|x| \leq -4$

d) $|x| > -7$

5. Rewrite using absolute value notation.

a)

$$|x| \leq 3$$

b)

$$|x| > 2$$

c)

$$|x| \geq 2$$

d)

$$|x| < 4$$

6. Graph $f(x) = |x-8|$ and $g(x) = |-x+8|$.

a) What do you notice?

$g(x)$ is just $f(x)$ mirrored in the y-axis.

b) How could you have predicted this?

by factoring out -1 from $g(x)$ to make it $g(x) = |-(x-8)|$, the -1 behaves like the k value on any other function, simply mirroring the graph in the y-axis.

7. Graph the following functions.

a) $f(x) = |x-2|$

b) $f(x) = |x|+2$

c) $f(x) = |x+2|$

d) $f(x) = |x|-2$

8. Compare the graphs you drew in question 7. How could you use transformations to describe the graph of $f(x) = |x+3|-4$?

translate left 3 units

translate down 4 units

9. Predict what the graph of $f(x) = |2x+1|$ will look like. Verify your prediction using graphing technology.

$$f(x) = |2(x+\frac{1}{2})|$$

h. compression by a factor of $\frac{1}{2}$

translate left $\frac{1}{2}$ units

10. Predict what the graph of $f(x) = 3-|2x-5|$ will look like. Verify your prediction using graphing technology.

$$f(x) = 3-|2(x-\frac{5}{2})|$$

$$f(x) = -|2(x-\frac{5}{2})|+3$$

reflected in x-axis

h. compression by a factor of $\frac{1}{2}$
